

HUNGRY FOR POWER?

This should satisfy your needs.

Need more mobile power to help run your operation? Whether it's auxiliary juice to run a compressor, saw, or other tools of the trade, now you can plug into the International PowerPack 3, a 3000W AC power system available on High Performance vehicles. With the PowerPack 3 integrated within your electrical system, you can run equipment without having the hassle of an add-on generator. More power to you.

Pure Power on wheels with the PowerPack 3

To support the ever-increasing demand for electrical power, International offers PowerPack 3, the first 3000W on demand AC power system solution available factory-installed on High Performance vehicles. By specing PowerPack 3 as a vehicle option, you can control expenses, improve efficiencies and eliminate the costly downtime of having to add a gas-powered generator down the road.

By selecting the International® Diamond Logic® PowerPack 3, you get the benefit of an integrated power system that is stable and tucked away, out-of-sight within the vehicle's electrical system. Even better, it gives your drivers all the auxillary power they need, while giving you the satisfaction and peace-of-mind of running your business profitably.

PowerPack 3 Benefits:

Control costs: Displaces add-on generators that require routine maintenance

Reduce wear: PowerPack 3 extends life of battery and alternator

Reduce installation time: Factory-installed solution saves fleet installation time and expense

Peace-of-mind: Extremely reliable and virtually maintenance-free. Backed by International and comes with a limited 2-year warranty.

Uses: Power tools, lights, test equipment, compressors

Hassle free: Eliminates the hassle of loading and unloading heavy generators and fuel cans. PowerPack 3 is work-ready at the flip of a switch.

AC Output: 3000W Continuous/5000W Surge

DC Output: 100A @ Idle

Special features:

- Controlled through International's Diamond Logic® Electrical System
- Diagnosed via laptop or cluster gauge display
- True mobile power solution
- Only OEM installed AC power system

As Reliable as Reliable Gets

Unlike gas-powered generators that can be noisy, dirty and prone to ongoing upkeep, the PowerPack 3 is extremely reliable and virtually maintenance-free. The PowerPack Solution is designed, installed and backed by International and its nationwide service network.

All the Onboard Power You Need

The PowerPack 3 provides heavy-duty mobile power for power tools, lights and compressors. As well, the pure sine wave power provides the even and consistent power necessary for sensitive equipment such as computers and test equipment. The High AC surge (5000W) is capable of starting pumps and heavy-duty motor loads. So you'll always have power to spare.

Well Designed, Cost-Effective Solution

Because the PowerPack 3 can be chassis mounted and enclosed within the battery box, it won't intrude on valuable cargo and compartment space. In addition, this option saves fleet installation time and expense. The PowerPack 3 can also come to you temporarily mounted on the frame rail, allowing you to mount it in an alternate location. Both factory installed solutions eliminate the potential for theft that is common with add-on gas generators.

Full AC Power With No Manual Throttle Manipulation

With the PowerPack 3, there's no manual throttle manipulation necessary – you're provided with safe mobile power that saves fuel and reduces wear on the battery and the alternator. Plus, there's always more DC power to start the vehicle, since the batteries are always at full load.
